PROFESSIONAL SUMMARY

Senior Full-Stack Engineer & Tech Lead with 6+ years modernizing mission-critical Medicaid systems for state government. Migrated a legacy mainframe worker portal to the cloud and built an AI-powered defect triage system that cut resolution time **40–60%**. Ships production-grade React/.NET/Azure architecture at scale – **1M+** daily API calls, **zero failures** – while leading and mentoring **10+** engineers.

EXPERIENCE

Senior Full-Stack Engineer & Tech Lead — Deloitte Consulting

Sept 2020 – Present

State of Florida Medicaid Worker Portal & Citizen Application Platform

- Cut defect resolution time **40–60%** by building an AI-powered triage and page-generation system – Copilot-powered agents across a full-stack monorepo (frontend, backend, eApp) that diagnose root causes, suggest fixes, and generate new application pages. Triageed **100+** defects and auto-generated **30–50+** pages since launch, removing the need to hire additional developers for a mounting backlog.
- Owned the client requirements lifecycle end-to-end – partnered directly with State of Florida stakeholders to capture business needs, authored requirement and design docs, and coordinated the development team from design through production release.
- Spearheaded the Agile migration of the worker portal from monolithic mainframe to cloud, architecting a real-time sync cycle (Precisely DB → React → mainframe) that enabled zero-disruption incremental rollout. Mentored **10+** developers throughout the transformation.
- Architected a React SPA + .NET case summary page aggregating **75+** database tables in real time – **sub-3s** load time across **1M+** daily API calls with **zero failures** and **100k+** daily page loads.
- Delivered real-time Medicaid data access by migrating core APIs off a 2x-daily Oracle batch refresh onto a live, real-time-synced Precisely SQL database.
- Eliminated manual income verification for citizen applicants by integrating AI-powered paystub extraction (AWS Textract + Bedrock) into the benefits portal, automatically parsing income data and capturing proof documents for compliance.
- Slashed SQL query latency **4–5s** to **<2s** on large production datasets through composite indexing, parameter-sniffing fixes, and implicit-conversion debugging.
- Tuned Azure Container Apps (concurrency, replica autoscaling, p90 latency) for cost-effective, production-scale deployment.

TECHNICAL SKILLS

- **Languages:** JavaScript, Java, C#, C++, SQL
- **Frontend:** React, HTML, CSS
- **Backend:** .NET Core APIs, Spring Boot, RESTful API Design, Microservices
- **Cloud & Infrastructure:** Azure (Container Apps, SQL Hyperscale, App Insights), AWS (Textract, Bedrock), Docker
- **Databases:** SQL Server, Azure SQL, Oracle, PostgreSQL, Query Optimization
- **AI & Agents:** GitHub Copilot, Claude API, Generative AI Systems, Prompt Engineering
- **Leadership & Delivery:** Agile/Scrum, CI/CD (Azure DevOps), Code Reviews, System Design, Technical Mentorship, Stakeholder Management
- **Tools & Platforms:** Git, Azure DevOps, VS Code, Visual Studio, DBeaver, Precisely

EDUCATION

Pennsylvania State University

May 2020

Bachelor of Science, Computer Science

Harrisburg Area Community College

Dec 2017

Associate Degree, Math & Computer Science

Dean's List: Spring 2017, Fall 2017, Spring 2019, Spring 2020

AWARDS & RECOGNITION

- **Outstanding Performance Award:** Recognized for outstanding performance and delivery impact on the State of Florida Medicaid modernization program
- **Deloitte Applause Award:** Multiple recognitions for exceptional contributions and rapid adaptation to complex projects
- **Top Performer:** Consistent top performer since joining Deloitte in 2020
