PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with 6 years architecting production Medicaid systems for state agencies. Led worker portal modernization (mainframe to cloud) and citizen application portal. Recently built AI-powered defect triage and page generation system reducing resolution time by 40–60%. Full-stack: React, .NET, Azure, AWS, AI agents. Bridges business requirements with modern cloud architecture.

EXPERIENCE

Senior Full-Stack Engineer & Tech Lead — Deloitte Consulting

Sept 2020 – Present

State of Florida Medicaid Worker Portal & Citizen Application Platform

- Built AI-powered defect triage and resolution system (2 months ago, ongoing): Created monorepo (frontend, backend, eApp service) with AI agents powered by Copilot. Agents perform full-stack defect triage, identify root causes, and suggest fixes. Second agent generates new application pages using Deloitte React framework, integrates into existing driver flow, explains code. Impact: 40–60% reduction in defect resolution time; 50–100 defects triaged in first 2 weeks, 100+ total since launch; 30–50+ new pages generated. Solved critical staffing constraint: eliminated need for additional developers to address mounting defect backlog.
- Led worker portal modernization: multi-phase transformation from monolithic mainframe to cloud, enabling workers to process cases faster with real-time data. Reduced training burden for new staff by replacing complex mainframe workflows with intuitive modern UI. Designed sync cycle (read Precisely DB → React portal → write back to mainframe → refresh) enabling incremental migration. Foundation supports future backend replacement without disrupting production. Mentored 10+ developers.
- Architected and built case summary page (React SPA + .NET API): aggregates 75+ database tables with real-time Precisely DB data. Performance optimization across frontend (lazy loading, parallel API calls), backend (modular routing), infrastructure (Azure Container Apps). Metrics: sub-3s load time, 1M+ daily API calls (zero failures), 100k+ daily page loads.
- Led database transformation: migrated APIs from Oracle DB (2x daily refresh) to live Precisely SQL DB (real-time mainframe sync). Mapped fields, optimized performance. Enabled client real-time Medicaid data access.
- Enhanced citizen application portal: web-based platform allowing citizens to submit benefits applications. Integrated AI paystub extraction (AWS Textract + Bedrock) enabling automatic income data extraction from documents. Citizens skip manual data entry; system silently collects proof documents for later verification.
- Optimized SQL performance: composite indexing, parameter sniffing fixes, implicit conversion debugging; reduced query latency 4–5s → <2s on large datasets.
- Configured Azure Container Apps: tuned concurrency (100–150 req/container), replica scaling, p90 latency optimization for cost-effective production scale.

TECHNICAL SKILLS

- **Languages:** JavaScript/TypeScript, C#, Java, SQL
- **Frontend:** React, React DataTable, React Select, react-tabs
- **Backend:** .NET Core APIs, Spring Boot, RESTful API Design
- **Cloud & Infrastructure:** Azure (Container Apps, SQL Hyperscale, App Insights), AWS (Textract, Bedrock), Docker
- **Databases:** SQL Server, Azure SQL, Oracle, Precisely DB, Query Optimization
- **AI & Agents:** Copilot, Claude API, Generative AI Systems
- **Enterprise Integration:** Mainframe systems, Real-time data sync, Adapter patterns, Legacy modernization
- **Tools & Platforms:** Git, Azure DevOps, VS Code, Visual Studio, DBeaver

EDUCATION

Bachelor of Science, Computer Science — Pennsylvania State University, May 2020

Associate Degree, Math & Computer Science — Harrisburg Area Community College, Dec 2017

Dean's List: Spring 2017, Fall 2017, Spring 2019, Spring 2020

AWARDS & RECOGNITION

Deloitte Applause Award: Multiple recognitions for exceptional contributions and rapid adaptation to complex projects
Top Performer: Consistent top performer since joining Deloitte in 2020
